

Modify the Big Assignment:

1. Write a C/C++ program to take an input from a .txt file, e.g int a = b + 1c; and identify the tokens (valid token with typename, and invalid tokens) and write the identified tokens with its type in a separate .txt file.

Lab Task-2:

2. Read a text message from a .txt file, calculate and print the number of vowels and consonants from the contents of that particular file in the console.
